Algebra 1 - Unit 8 Guide
Exponent Rules (Laws of Exponents)

| Properties | General Form | Application | Example |
| :--- | :---: | :---: | :---: |
| Product Rule <br> Same base add exponents | $a^{m} a^{n}$ | $a^{m+n}$ | $x^{5} x^{3}=x^{5+3}=x^{8}$ |
| Quotient Rule <br> Same base subtract <br> exponents | $a^{m}$ | $a^{n}$ | $a^{m-n}$ |
| Power Rule I <br> Power raised to a power <br> multiply exponents. | $\left(a^{m}\right)^{n}$ | $a^{m n}$ | $\frac{x^{9}}{x^{5}}=x^{9-5}=x^{4}$ |
| Power Rule II <br> Product to power distribute <br> to each base | $(a b)^{m}$ | $a^{m} a^{n}$ | $\left(x^{3}\right)^{4}=x^{3 \cdot 4}=x^{12}$ |
| Negative Exponent I <br> Flip and change sign to <br> positive | $a^{-m}$ | $\frac{1}{a^{m}}$ | $\left(4 x^{3}\right)^{2}=4^{2} x^{3 \cdot 2}=16 x^{6}$ |
| Negative Exponent II <br> Flip and change sign to <br> positive | $\frac{1}{a^{-m}}$ | $a^{0}$ | $a^{m}$ |
| Zero Exponent <br> Anything to the zero power <br> $(e x c e p t ~ 0) ~ i s ~ o n e ~$ | $a^{0}=1$ | $x^{-3}=\frac{1}{x^{3}}$ |  |

- It is important to note that none of these applications can occur if the bases are not the same.

For example, $\frac{x^{5}}{y^{3}}$ cannot be simplified.

## Example:

- $\frac{\left(2^{3} y^{2}\right)^{5}}{2^{10} y^{16}}$
$\rightarrow$ Power Rule
- $\frac{2^{3 \cdot 5} y^{2 \cdot 5}}{2^{10} y^{16}}$
- $\frac{2^{15} y^{10}}{2^{10} y^{16}}$
$\rightarrow$ Quotient Rule
- $2^{15-10} y^{10-16}$
- $2^{5} y^{-6}$
$\rightarrow$ Negative Exponent
- $\frac{32}{y^{6}}$

Example:

- $\left(\frac{p^{-4} q}{r^{-3}}\right)^{-3} \quad \rightarrow$ Power Rule
- $\frac{p^{-4 \cdot-3} q^{1-3}}{r^{-3 \cdot-3}}$ Note: When a base does not have an exponent there is really $a$ one as the power. So that, $q$ is understood as $q^{1}$
- $\frac{p^{12} q^{-3}}{r^{9}} \rightarrow$ Negative Exponents
- $\frac{p^{12}}{q^{3} r^{9}}$

## Algebra 1 - Unit 8 Study Packet

## Exponent Rules (Laws of Exponents)

## Skill \#1 - Powers of Zero

1. Simplify:

$$
(6 x)^{0}=
$$

3. Simplify:

$$
\left[4\left(x^{2}\right)^{4}\right]^{0}=
$$

2. Simplify:

$$
6 x^{0}=
$$

4. Simplify:

$$
4\left[\left(x^{2}\right)^{4}\right]^{0}=
$$

Skill \#1 $\quad$ I can evaluate expressions involving a power of zero.
Skill \#2 - Product Rule (Multiplying with Like Bases)
5. Write the following expression in simplified form:

$$
\left(8 x^{6}\right)\left(x^{3}\right)
$$

7. Write the following expression in simplified form:

$$
\left(3 x^{8} y\right)\left(-10 x y^{10}\right)
$$

6. Write the following expression in simplified form: $\left(-3 y^{2} z^{2}\right)\left(y^{4} z^{5}\right)$
7. Write the following expression in simplified form: $\left(7 a^{3} b^{5}\right)\left(-9 a^{6} b^{3}\right)$

Skill \#2 $\quad$ I can evaluate expressions involving multiplication of exponents with the same base. $\square$ Need more practice (IXL - V.4)
Skill \#3 - Quotient Rule (Dividing with Like Bases)
9. Write the following expression in simplified form:

$$
\frac{x^{3}}{x}
$$

10. Write the following expression in simplified form:

$$
\frac{4 g^{5} h^{8}}{2 g^{2} h^{2}}
$$

11. Identify each true statement:

| $\frac{12 x^{5} y^{8}}{4 x y^{3}}=3 x^{4} y^{5}$ |
| :---: |
| $\frac{14 x^{4} y^{10}}{2 x^{2} y^{4}}=12 x^{2} y^{6}$ |
| $\frac{15 x^{7} y}{3 x^{5} y}=5 x^{2}$ |
| $\frac{20 x^{4} y^{8}}{10 x^{2} y^{4}}=2 x^{2} y^{2}$ |

Skill \#3 $\quad$ I can evaluate expressions involving division of exponents with the same base. $\square$ Need more practice (IXL - V.5)

Skill \#4 - Power Rule 1 (Raising a Power to a Power)
12.

$$
\left(y^{3}\right)^{9}
$$

13. 

$\left(3 x^{2} y^{3}\right)^{3}$
14. Identify each true statement:

| $\left(5 x^{3} y^{2}\right)^{4}=625 x^{12} y^{8}$ |
| :---: |
| $\left(5 x y^{2}\right)^{2}=25 x^{2} y^{4}$ |
| $\left(2 x^{3} y^{2}\right)^{2}=4 x^{5} y^{4}$ |
|  |
| $\left(2 x^{3} y^{2}\right)^{3}=6 x^{9} y^{6}$ |

Skill \#3 $\quad$ I can evaluate expressions involving raising an exponent to another power. $\square$ Need more practice (IXL - V.7)
Skill \#5 - Power Rule 2 (Raising a Product/Quotient to a Power)
15. Simplify:

$$
\left(4 x^{7} y^{5}\right)^{4}
$$

17. Simplify:

$$
\left(\frac{3 a b^{2}}{c^{3}}\right)^{2}
$$

16. Simplify:

$$
\left(\frac{x^{4}}{y^{5}}\right)^{3}
$$

18. Simplify:

$$
\left(\frac{2 x^{3}}{6 y^{5}}\right)^{3}
$$

Skill \#3 $\quad$ I can evaluate expressions involving raising a product/quotient to a power. $\square$ Need more practice (IXL - V.7)

## Skill \#6 - Negative Exponent Rules

19. Simplify:

$$
x^{-4}
$$

21. Simplify:

$$
\frac{b^{-6}}{a^{-7}}
$$

20. Simplify:

$$
\frac{1}{b^{-5}}
$$

22. Simplify:

$$
\frac{9 x^{-4}}{3 y^{2}}
$$

Skill \#3 $\quad$ I can evaluate expressions involving negative exponents. $\square$ Need more practice (IXL - V.3)

Skill \#7 - Combination of Exponent Rules
23. What is equivalent to:

$$
\frac{a b\left(15 a^{3} b^{2} c\right)}{25 b^{5} c^{2}}
$$

25. What expression is the simplest form of:
$\left(6 x^{4}\right)^{-1}$
26. Which is a simplified form of the following expression using only positive exponents?

$$
\left(\frac{x^{3}}{y^{4}}\right)^{-3}
$$

29. Simplify:

$$
\frac{6\left(x^{4}\right)^{2}}{x^{5}}
$$

24. What expression is the simplest form of:

$$
\left(4 x^{3} y\right)\left(5 x^{5} y^{2}\right)^{2}
$$

26. What is a simplified form of the following expression where $\mathrm{a} \neq 0$ and $\mathrm{b} \neq 0$ ?

$$
\frac{\left(4 a b^{3}\right)^{2}}{32 a^{7} b}
$$

28. Which is a simplified form of the following expression using only positive exponents?
$(5 x)^{-3}\left(25 x^{-8}\right)$
29. Simplify:

$$
\frac{\left(8 x^{3}\right)^{3}}{20 x^{10}}
$$

Skill \#3 $\quad$ I can evaluate an expression involving a combination of exponent rules. $\square$ Need more practice (IXL - V.6)
